Filename-based descriptive information:

Etree:

- Standard for live-concert-recording collecting community
- Early SHN format: no meta tags

gd83-10-31.horvath-sennheiser.ladner.19894.sbeok.d1t01.shn

- Relies on text files with richer information
- FLAC format introduced: embeddable meta tags

Source: http://wiki.etree.org/index.php?page=NamingStandards

ID3v1 (1996)

- First attempt to embed meta tags into MP3s
- Initial version fraught with limitations:
 - Only 9 fields to describe a song file (later 12)
 - Max 30 characters for artists, albums, songs
 - No disc number

Source: http://en.wikipedia.org/wiki/ID3

ID3v2 (1998)

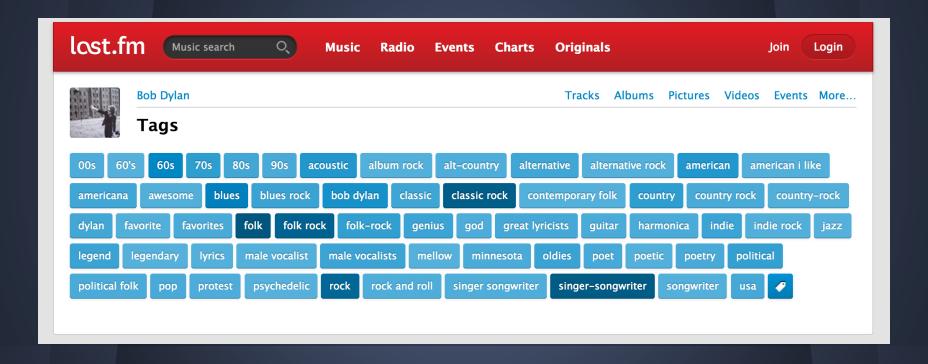

- Enhanced standard created by group of professionals
- Objective: universal applicability
- Example tags introduced:
 - Rating (1-5 stars)
 - Images: cover, concert photo, "a bright colored fish"
 - Beats per minute, copyright info
- Used in MP3s, AIFF, Apple M4A

Next generation: Creative, rich descriptions of music

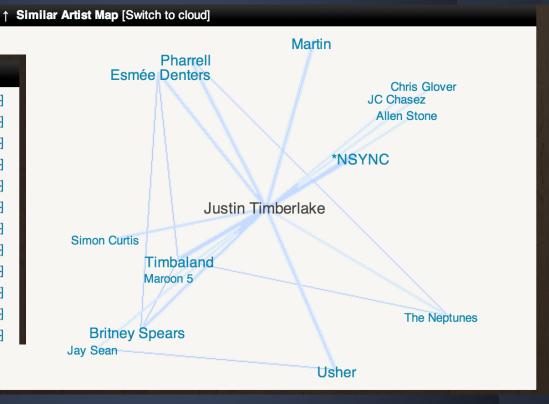

- AllMusic Mood "Romantic", "Bittersweet", "Druggy"
- Beatport BPM tagged in each song
- **Pandora** staff-generated descriptors (Music Genome)
- **Last.FM** crowd-sourced descriptors (tag soup?)
- <u>What.CD</u> community-driven association engine, web of similar artists
- **Beats Music** highly curated and human-centered (to be retrieved with "The Sentence")
 - o "I'm ____ & feel like ____ with ____ at ____."

Last.FM tags for Bob Dylan
